## product design foundation: focus on light&shadow

This is a product design foundation work, focusing on lights and shadows. During the workshop, I spent a lot of time in research, attempted to find the relationship between model and light. Since the flexible features, paper was my main material. Through this experiment, I concluded that the product is not only restricted by its own material, but also restricted by the environment, such as the color, position and the intensity of the light source. In the end, I made my model as lamps.

Tool: Paper, Digital camera, Photoshop

**thank you!**
